

Release Notes for DrChrono Mobile Version 11.0.105

Last modified on 11/06/2024 1:33 pm EST

Updates

Summary	Description
Medication Favorites - Drug Database Migration	Lexicomp drugs are now automatically converted to their FDB counterpart when selected from favorites.
Invite user to refresh clinical note if locked in iOS	When a clinical note is locked and out of sync and the user attempts to edit it, an error alert will now display, inviting the user to refresh the clinical note.

Resolutions

Summary	Description
Adderall not listing as controlled drug if applied from RxProfile	Fixed an issue where the Adderall drug was not properly categorized when populated from the Rx Profile.
Notification displayed when drug is converted from LexiComp to FDB	When a Lexicomp to FDB drug conversion occurs, an embedded alert shows whether the medication was converted successfully.
Unable to access reference field in iPad	Fixed an issue where the reference field's link was grayed out and not clickable within a clinical note form.
Send eRx Fix	Fixed an issue where prescriber defaulting to a provider other than staff member's primary provider when staff tries to send eRx.
