

DrChrono API Application

Last modified on 01/28/2025 12:21 pm EST

DrChrono Restful APIs allow your practice to connect to other services and leverage your data.

Sign in to your DrChrono account and navigate to Account > API. Create a new application by selecting "New Application".

(To note, the staff permission "Settings" will need to be enabled to access the API Page)

The screenshot shows a web form for creating a new API application. The form includes the following fields and controls:

- Name:** A text input field containing "Application Name".
- Client ID:** A text input field with a "Show" button.
- Client Secret:** A text input field with a "Show" button.
- Redirect URIs:** A text input field containing "Must be a valid URI (like https://... or myapi)". To the right are "Remove" and "+ Add new" buttons.
- API Version:** A dropdown menu set to "v4 (Hunt Valley)" with a "Documentation" link.
- Patient Iframe:** A section with "Iframe URL" and "Iframe Height" (with a "px" unit selector) input fields.
- Clinical Notes Iframe:** A section with "Iframe URL" and "Iframe Height" (with a "px" unit selector) input fields.
- PRIVATE Mode:** A yellow callout box explaining that the application is in private mode, only usable by the practice group, and providing instructions on how to contact support or switch to public mode.
- Save Changes:** A blue button at the bottom right of the form.

We require two pieces of information highlighted in red (Name and Redirect URIs). Ensure that your application is named for its intended service. Input a valid URI, for example -- https://myapp.com. Save changes to complete the application.

You are now ready to use our APIs. To get started, feel free to review our article "[Getting started with our APIs via Postman](#)".
