

Batch Ordering Schedule II Controlled Substances on the iPad

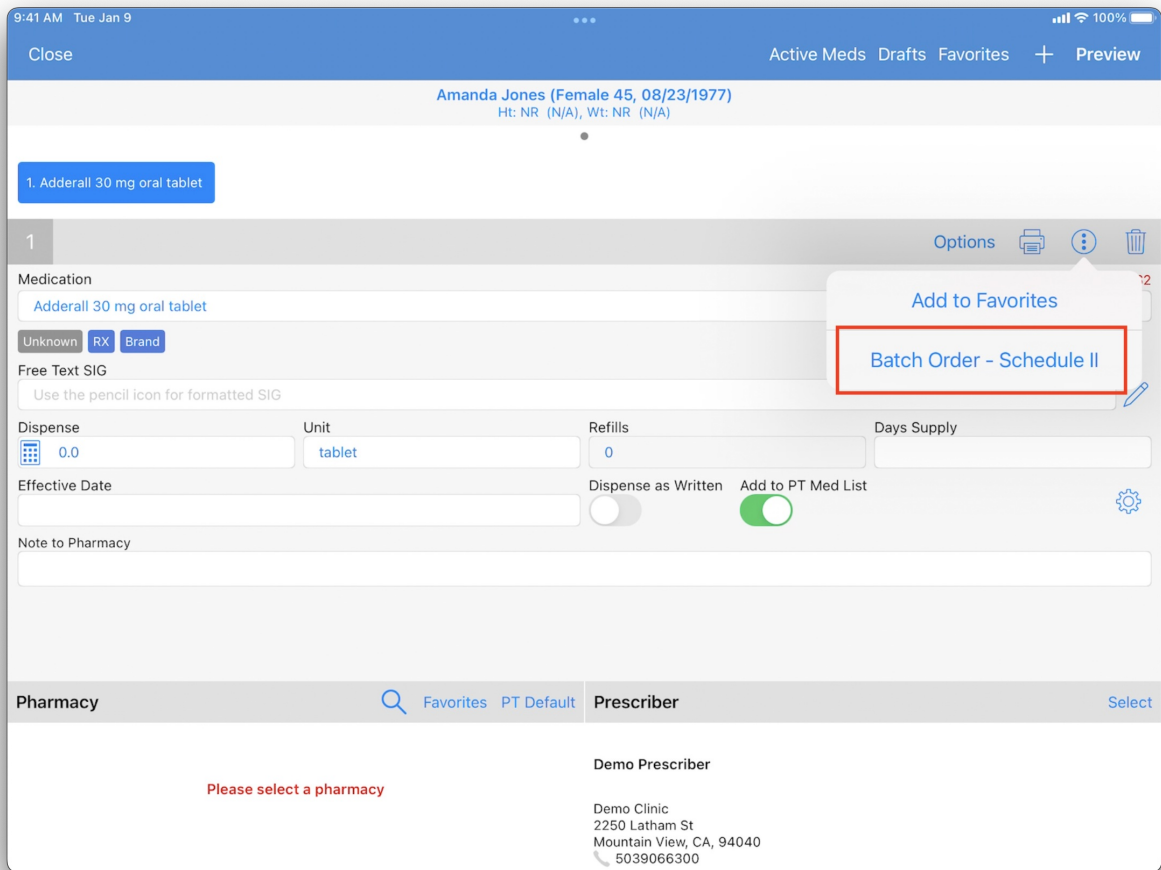

07/08/2024 7:22 pm EDT

If you need to order a schedule II controlled substance medication for a 90-day supply, for example for patients who maintain the same prescription, you can do so using the **Batch** button when sending a prescription from a patient's chart. This will create 2 additional medication orders with effective dates 30 days apart.

1. Go to a patient's chart and select **Send eRx**.

When you enter and select a schedule II controlled substance in the medication field a **Batch** button will be accessible by tapping the circle with three dots. Enter a **Days Supply** and click **Batch**. The total days supply for the batch cannot exceed 90 days and cannot have Refills > 0.

For more information on batch ordering, see [this article](#).
