How do I know if my patient has signed up for OnPatient?

07/08/2024 7:24 pm EDT

You will know if a patient has signed up and activated their OnPatient account by looking at the patient's chart.

On the patient's profile, you will see an **OnPatient Access Enabled** message.

If you need further information or to enable or evoke access, go to the **OnPatient Access** menu on the left-hand side of the patient's chart.
