

Quick Charting on iPhones

Last modified on 11/14/2024 8:31 pm EST

Use **Quick Charting** on the iPhone app to work on clinical notes during a video visit.

After launching the video visit, tap the patient's name and then tap **Quick Charting**. You can then work on the clinical note.

The green dot  on the upper right indicates that the video is active. The patient does not see your screen; only the video of your face. Once you are in a clinical note, tap **Back** to return to the other forms. Tap **Close** to leave **Quick Charting**.
