

What is the most recent version of the iPad app?

07/08/2024 7:28 pm EDT

We are always updating our apps with new features, bug fixes, and vulnerability updates. You must keep all your DrChrono apps up-to-date. At DrChrono, we recommend you always have the most up-to-date version of the EHR app. You can find the information [here](#).

Updating your Apps to the latest version means getting all the latest features, bug fixes, and security vulnerability updates. We are constantly updating our apps, just like Apple constantly updates its OS to fix bugs and security vulnerabilities. We are continually rolling out new features that help you improve charting speed, as well as better feature parity on the iPhone.

If you have a device that can't update to the latest version of the DrChrono EHR and DrChrono Patient Check-In app, it's time to invest in updating your hardware. Newer devices can support new versions of iOS and offer much better performance. It also means that you're going to get the latest features from DrChrono

On your iPad, visit the app store and search for DrChrono to download/update the latest version. If it says **Open**, you're up to date. If it says, **Update**, you can update to the latest version of the EHR, Check-In, or OnPatient apps.

DrChrono EHR / EMR
EHR, Medical Billing & RCM
Designed for iPad
