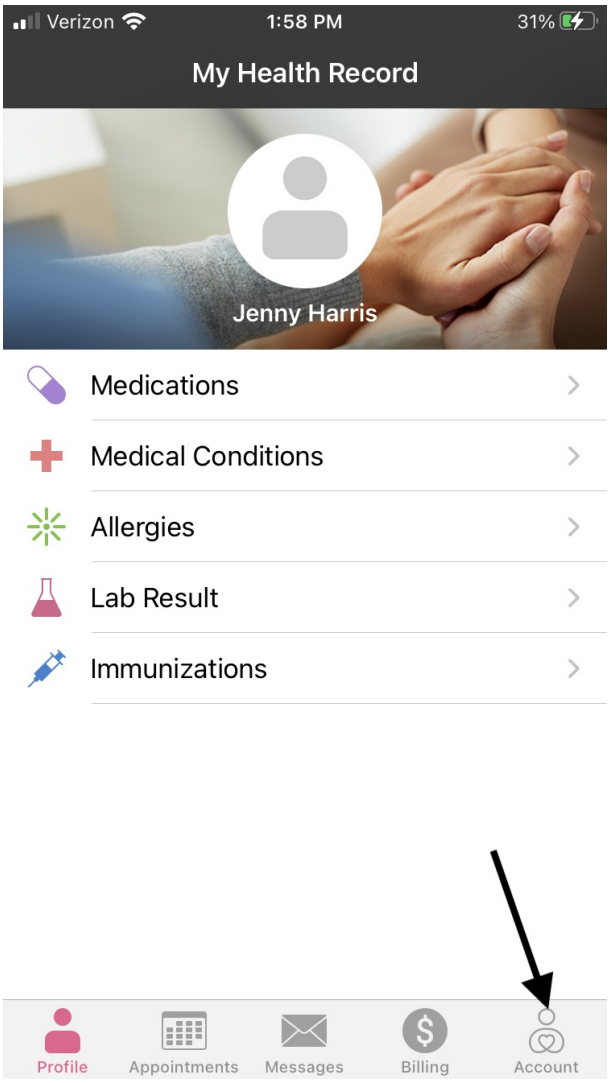
Sharing Health Data from your iPhone

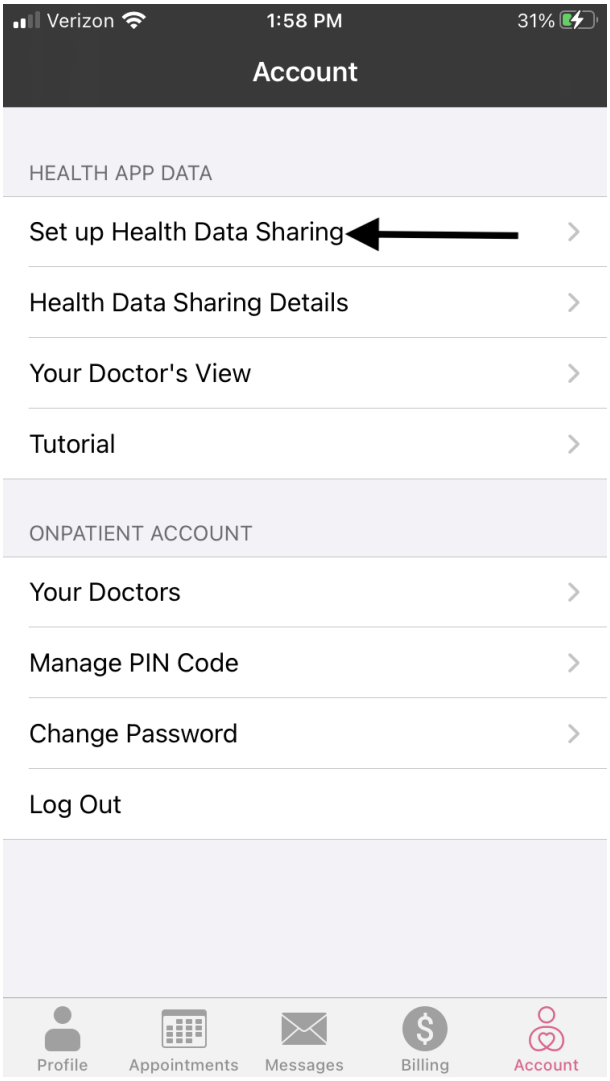
07/08/2024 7:28 pm EDT

Patients can share the health data on their iPhone with their providers. This data will sync into the 30-day snapshot in the patient's record for the provider to view.

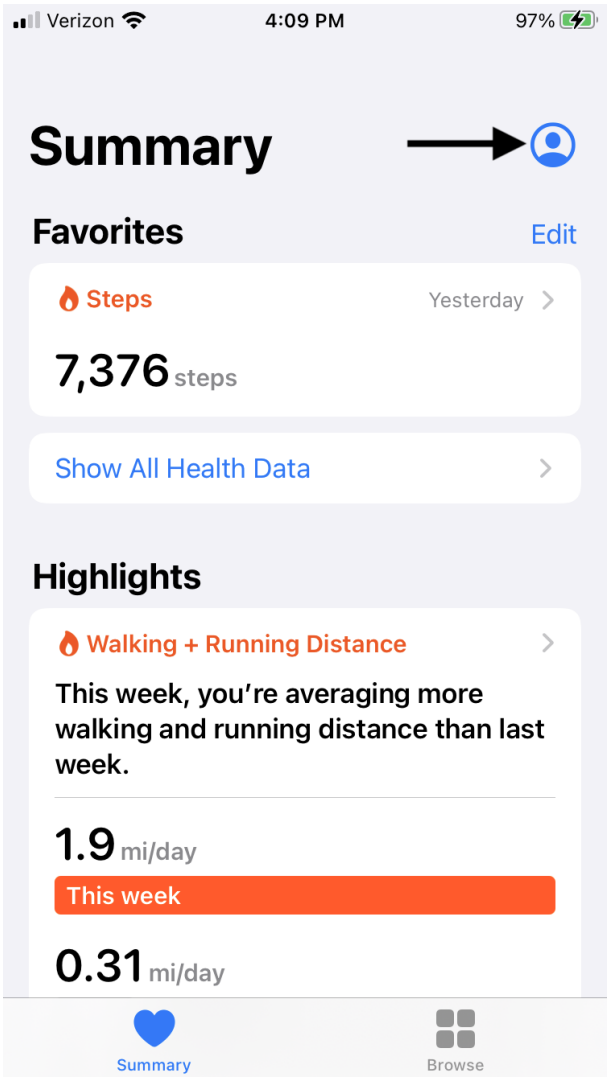
1. Navigate to the **Account** menu.



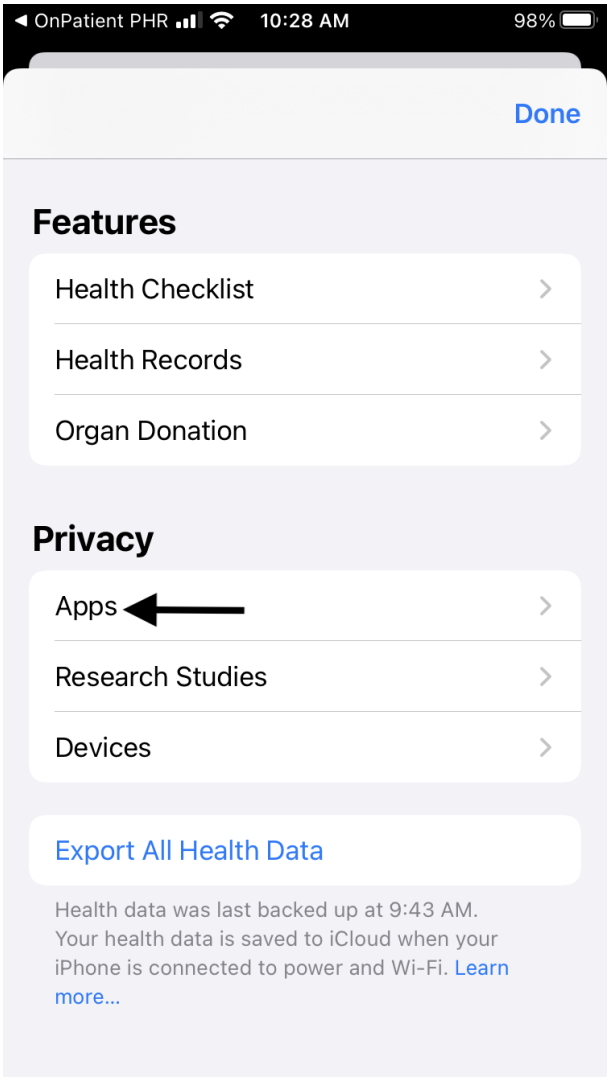
2. Select **Set Up Health Data Sharing**.



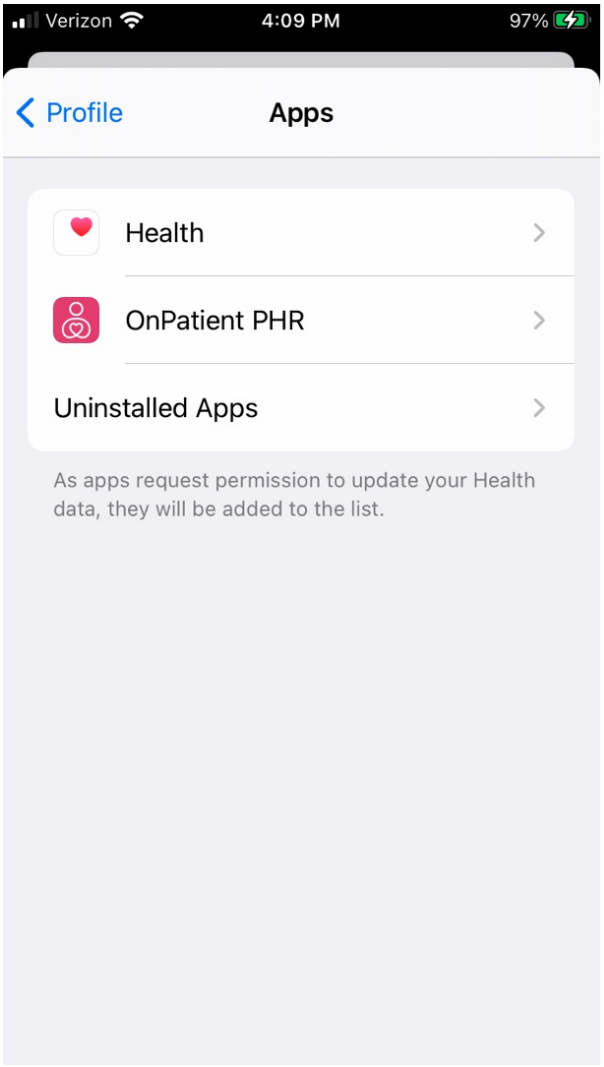
3. Select the profile icon.

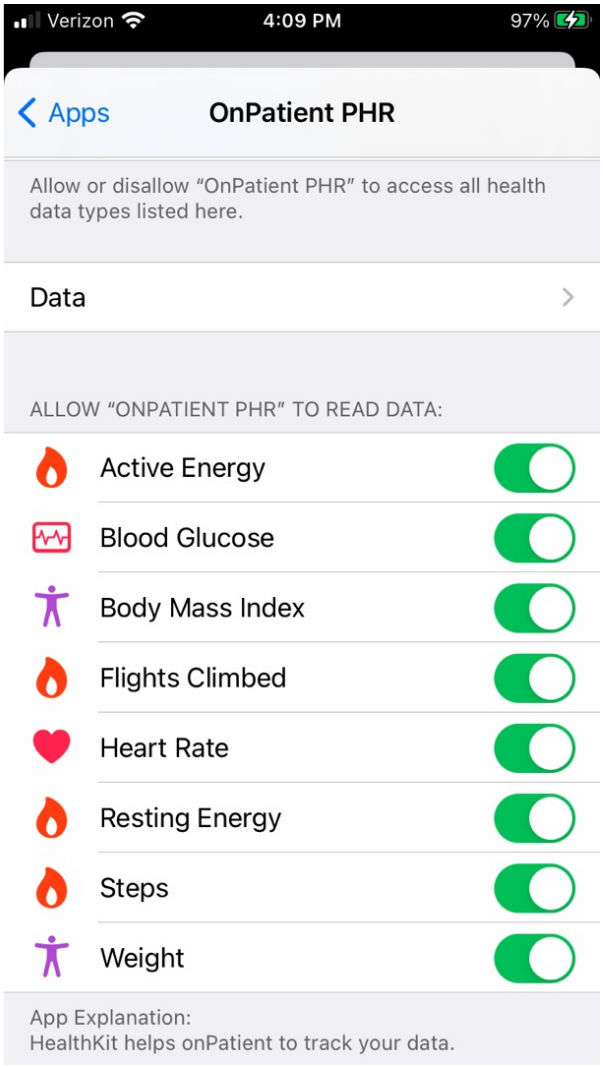


4. Select **Apps** in the Privacy section.

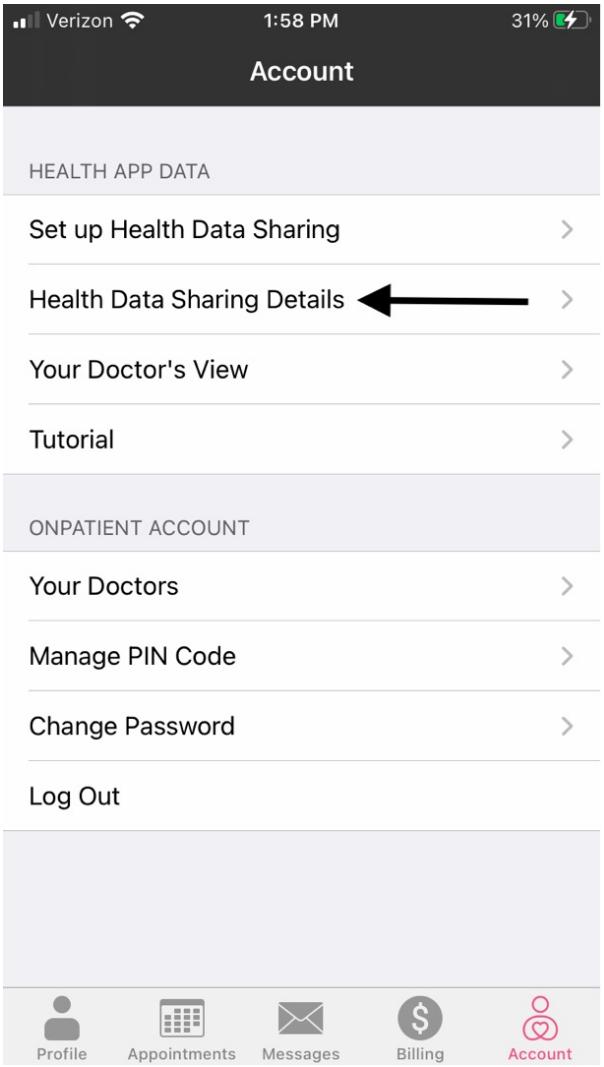


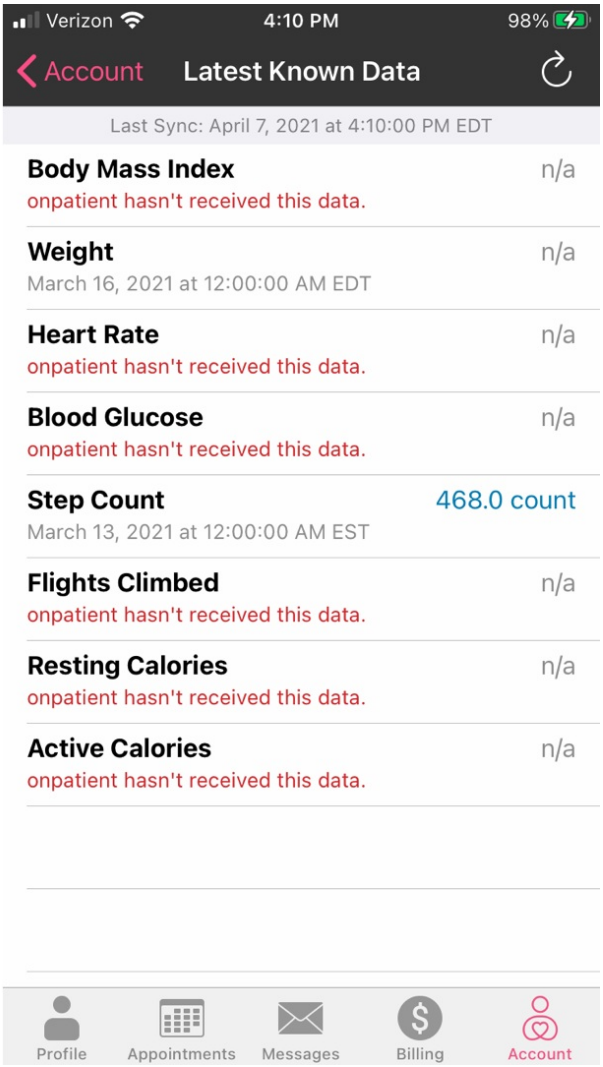
5. Select **OnPatient PHR** and choose the health data you would like to share. Tap **Apps** to return.

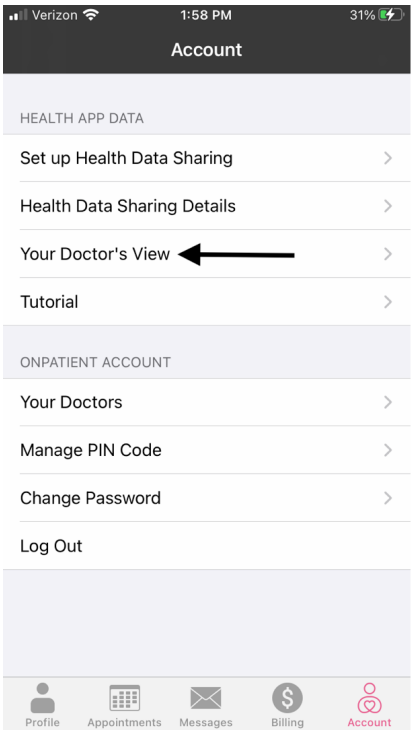


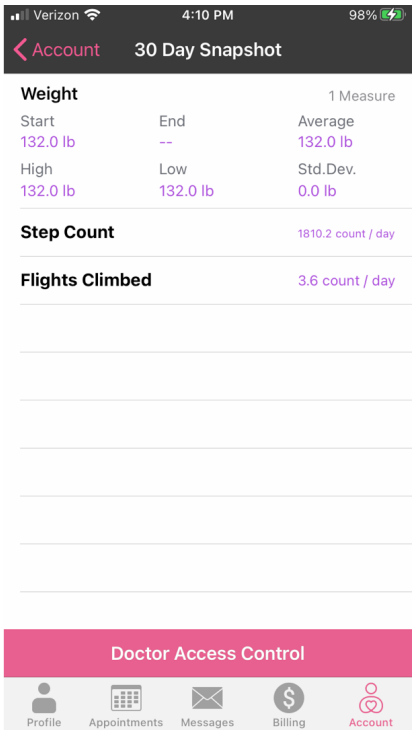


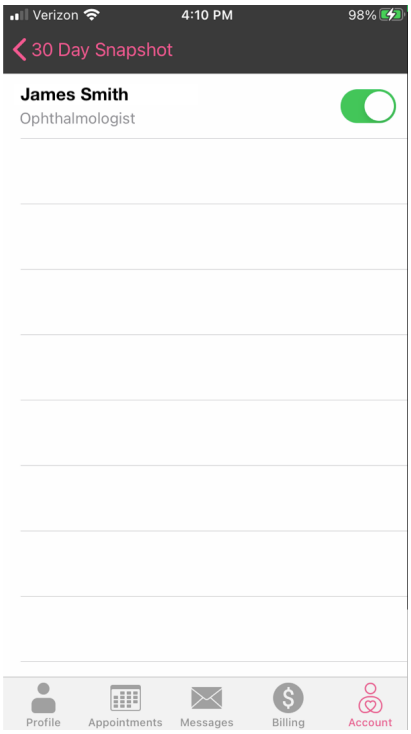
6. Under **Health Sharing Data** patients can see the data that has been synced from the device to their OnPatient account.











7. Under the **Your Doctor's View**, patients can see the 30-Day Snapshot. By selecting the **Doctor Access Control** button, they can turn on or off their data access.
