

Patient Reports

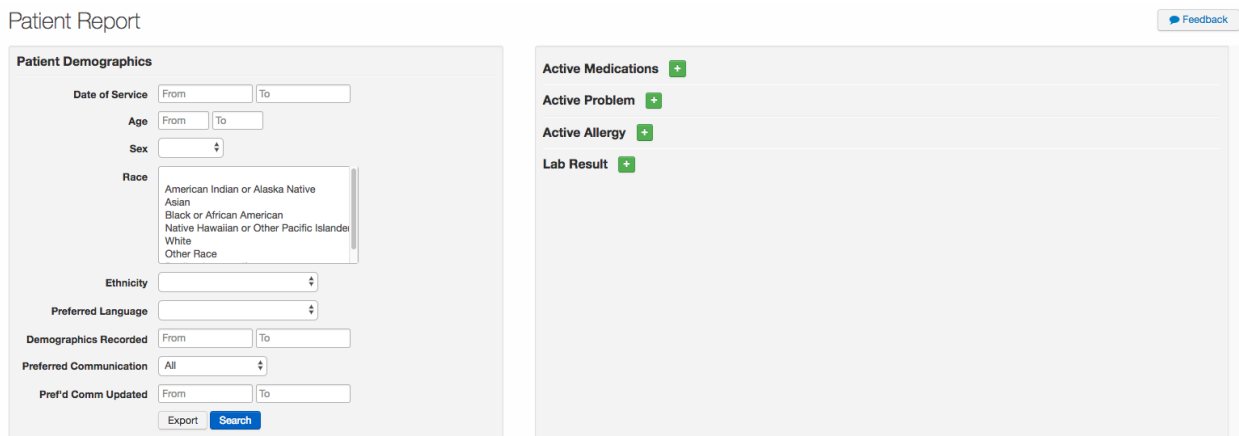

07/08/2024 7:31 pm EDT

The patient report feature allows you to generate patient reports based on demographics, medication, diagnoses, allergies, or lab results.

1. Go to Reports > Patient Report.

2. Select the parameters you would like to see in your report.

3. Active medications, problems, allergies, and lab results can be used for reports as long as the data is entered into the patient's chart. To search by medication, problem, allergy, or lab results, select the [+] next to the option. Click **Search** to run the report. Click **Export** and it will download the report in a .csv file.
