

What version of the EHR and Check-In app I am running?

07/08/2024 7:32 pm EDT

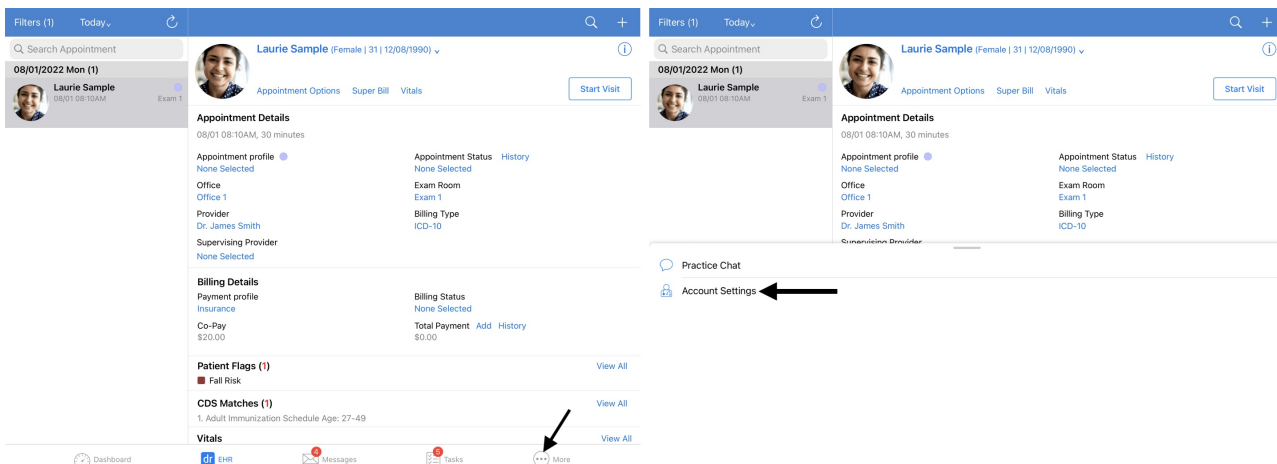

We are always updating our apps with new features and vulnerability updates. At DrChrono, we recommend you always have the most up-to-date version of the EHR and Check-In apps. You can find the information [here](#).

Updating your Apps to the latest version means that you're going to get all the latest features, bug fixes, and security vulnerability updates. We are constantly updating our apps, just like Apple constantly updates its OS to fix bugs and security vulnerabilities. We are constantly rolling out new features that help you improve charting speed, as well as better feature parity on the iPhone.

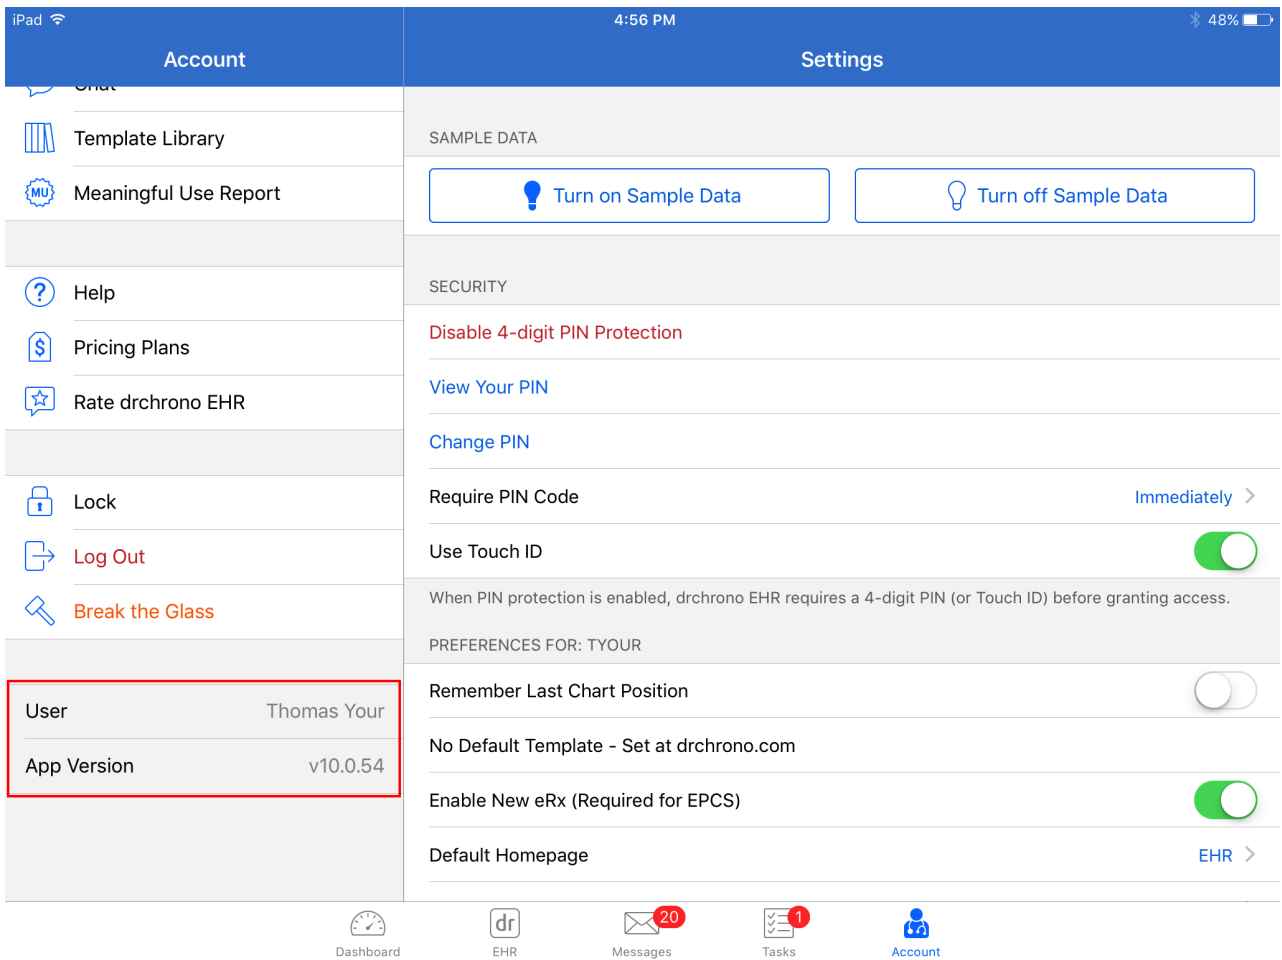

If you have a device that can't update to the latest version of the DrChrono EHR and DrChrono Patient Check-In app, it's time to invest in updating your hardware. Newer devices can support new versions of iOS and offer much better performance. It also means that you're going to get the latest features from DrChrono

The version number of your EHR app can be found under Account Settings in your EHR/EMR app.

Tap **More** option in the bottom toolbar and select **Account Settings**.

In your Account Settings, scroll down on the left-hand navigation. The user that is logged in and the version number will be displayed here.

Finding Your Version Number in the Check-In App

For the Check-In app, you can see the version on the main page in the lower right of the appointments list.
