# Patient Education Materials: How do I view public documents?

With Patient Education, providers may upload documents and share them with the public. The public documents are then available to all individuals, including those without a DrChrono account. Documents are searchable through search engines and represent a way for providers to improve their public outreach.

To view a document a provider uploaded, you may access the **Patient Education Materials** link at the bottom of the DrChrono public website. Alternatively, you may directly access Patient Education at https://www.drchrono.com/patient-education-materials/.
