

Batch Ordering Schedule II Controlled Substances

07/08/2024 7:42 pm EDT

If you need to order a schedule II controlled substance medication for a 90-day supply, for example for patients who maintain the same prescription, you can do so using the **Batch** button when sending a prescription from a patient's chart. This will create 2 additional medication orders with effective dates 30 days apart.

1. Go to a patient's chart and select **Send eRx**.

The screenshot displays a patient's chart interface. On the left is a sidebar menu with the following items: Demographics, Appointments, Clinical Dashboard, Documents, Tasks (2), Problem List (13), Medication List (7), **Send eRx** (highlighted in green with a black arrow pointing to it), Allergy List (4), Drug Interactions (1), CQMs, Intake Data, Lab Orders, and Immunizations. The main content area is titled 'New Prescription' and includes a 'Patient's Prescriptions' button with a plus sign. Below this is a 'Medication' form with a 'Favorite medications' dropdown. The form fields include: Type* (Medication, Compound, Supply), Medication* (dropdown), SIG* (with a gear icon), Effective Date, Dispense* (with a calculator icon), Dispense Unit* (dropdown), DAW (Yes, No), Refills (0), and checkboxes for 'Add to Favorites' and 'Add to Medication List' (checked). A 'Notes to Pharmacist' field is at the bottom with a disclaimer: '* Please do not enter SIG, Effective Date, Drug Name, Strength, Quantity or Dispense Unit in this field.'

When you enter and select a Schedule II controlled substance in the medication field a **Batch** button will appear. Enter a **Days Supply** and click **Batch**. The total days supply for the batch cannot exceed 90 days and cannot have Refills > 0.

If your Days Supply total exceeds 90 days, you will receive an error message.

drchrono.com says

The DEA limits the total prescription of a schedule II drug to a 90 day supply. Please reduce the total to 90 days or less to continue.
