Submit Multiple eRx Orders from the Patient Chart

Last modified on 11/04/2026 5:04 pm EST

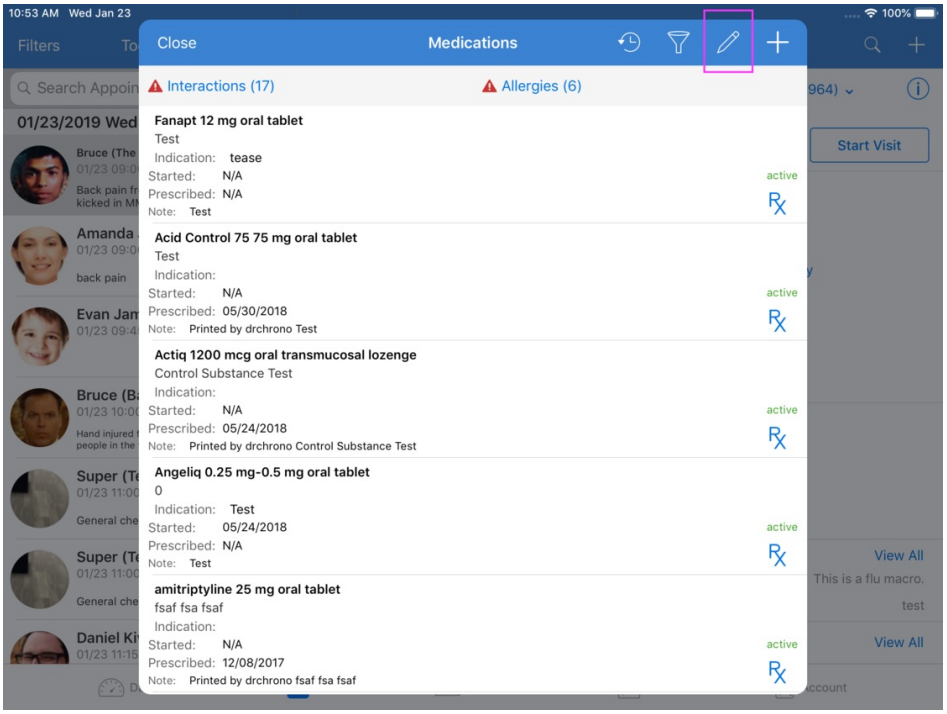

iPad | Web

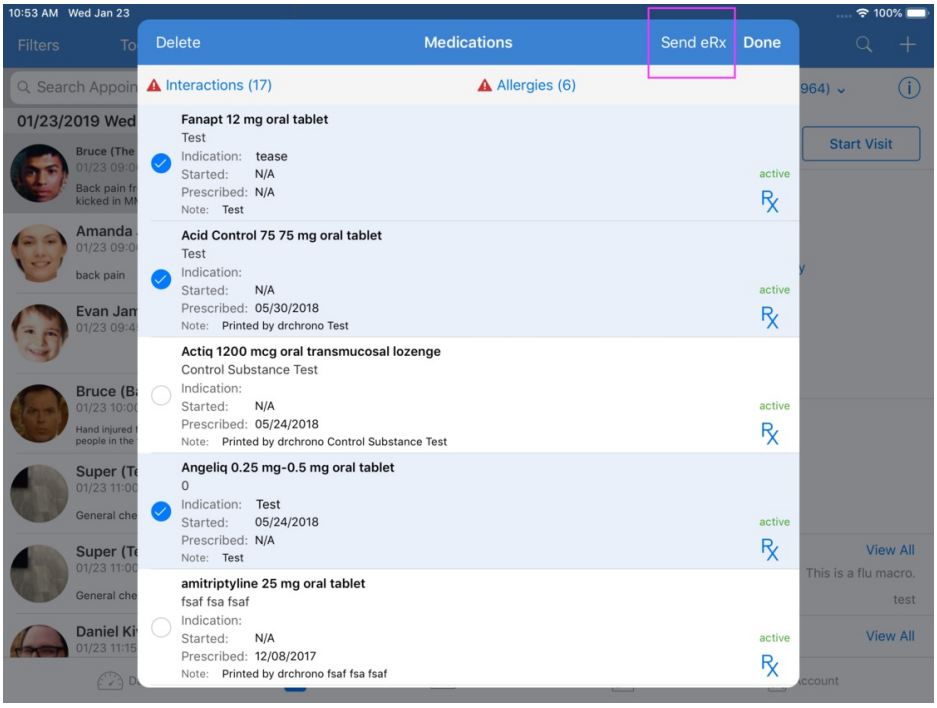

Providers can now improve their workflow by sending multiple eRx at once when in a patient's chart.

> Before sending a prescription, please ensure you have the patient's complete address, date of birth, and gender recorded in the patient's chart.

iPad

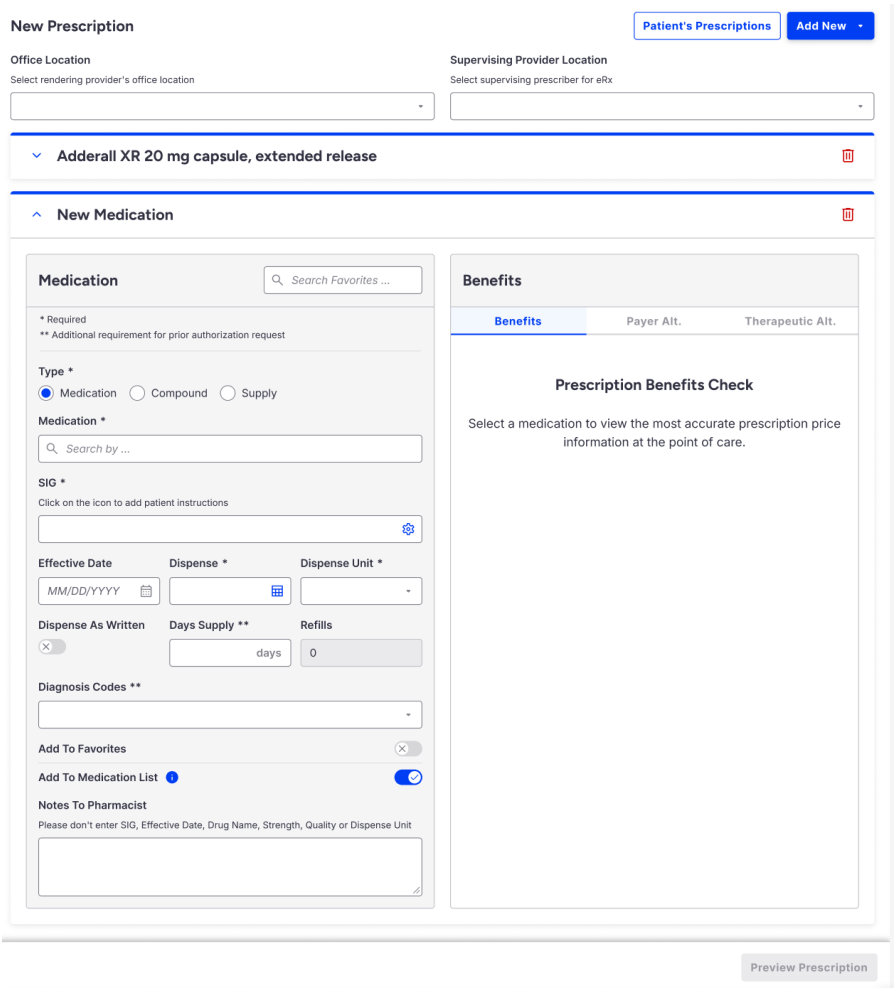

- Tap on the Patient Menu and then select Medications.
- Tap on the Edit (pencil) icon, select multiple medications, and tap on the Send eRx button. This will prepare multiple medications on the prescription screen for you to fill out.
- Click the print preview button.
- Then click the Send eRx button.

Web

- Open the patient's chart and select **Send eRx** in the left menu. For a returning patient, you can also use the reorder option in the **Medication List** to start from their current medications.
- Fill in the first medication.
- To add another, select **Add New** and choose **Medication**, **Compound**, or **Supply**. A new section opens below and the previous one collapses. If you started from reorder, each medication already has its own section.
- Repeat for each item. Select a collapsed section to reopen it, or select its trash icon to remove it.
- Check the pharmacy at the top of the page. To use a different one, select **Change Pharmacy**.
- Select **Preview Prescription**, review everything, then select **Send Prescription**.
