

# How do I send multiple eRx orders at the same time from the patient chart?

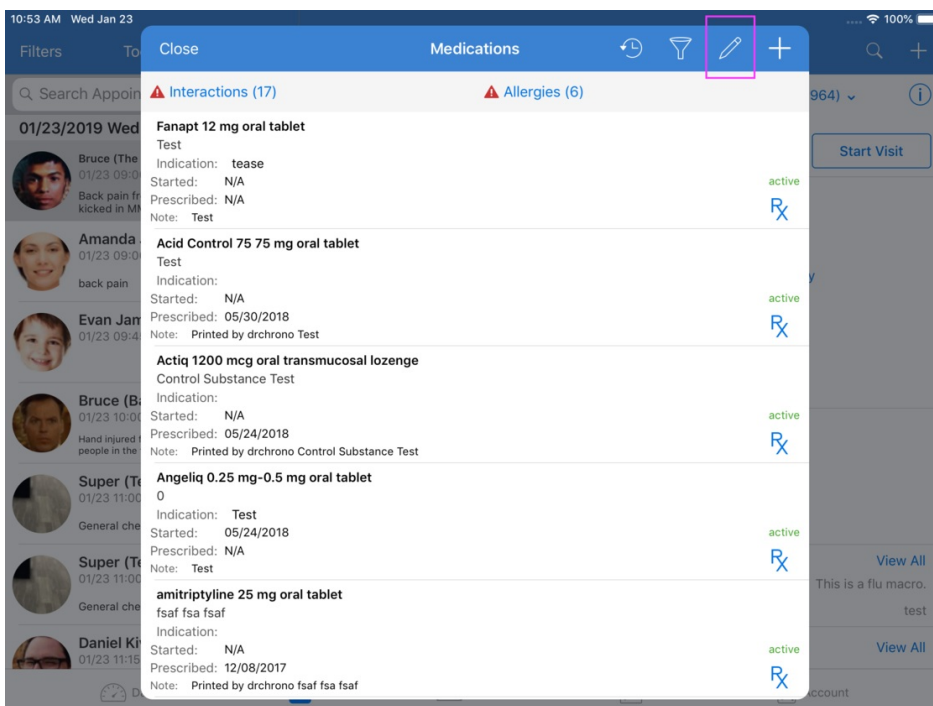

07/08/2024 7:50 pm EDT

Providers can now improve their workflow by sending multiple eRx at once when in a patient's chart.

**Note:** Before sending a prescription, please ensure you have the patient's complete address, date of birth, and gender recorded in the patient's chart.

On the iPad:

1. Tap on the Patient Menu and then select Medications.
2. Tap on the Edit (pencil) icon, select multiple medications, and tap on the Send eRx button. This will prepare multiple medications on the prescription screen for you to fill out.
3. Click the print preview button.
4. Then click the Send eRx button.

On the web:

1. Go to the patient chart and on the left menu bar click on Send eRx. Or if this is for a regular patient you may use the reorder option under the Medication List.
2. Fill in the new prescription box that appears.
3. To add the next medication click on the "Green + button" and another new eRx box will appear. If you are using the reorder option from an existing patient chart, then all the Rx boxes will appear on the same page.
4. Once all medications are added, choose the pharmacy and preview the prescription.
5. Click on Send Prescription at the top right.
