

Can I send a message through faxing? (Without attached referrals or documents)

07/08/2024 7:53 pm EDT

DrChrono's fax system is configured to send faxes associated with a patient.

Through the patient chart, you can fax:

- Uploaded Documents
- Lab Results
- Demographics
- Locked Clinical Notes
- Signed Consent Forms
- Amendments

You can also send a referral for a patient. Click [here](#) for information on sending referrals through your DrChrono account.

At this time, we do not support composing and sending messages through our fax line. Faxes have to be sent through the patient chart or referral. You can, however, compose a message, upload or scan it into DrChrono as a PDF document and then send that as a fax.
