Good Faith Estimate: Adding additional providers and/or facilities to your estimate

Last modified on 09/28/2026 10:42 am EDT

The No Surprises Act requires that the convening provider add all related expected charges for the service rendered to be included on a single Good Faith Estimate. The DrChrono Good Faith Estimate tool allows you to add providers and facilities easily.

- When you begin a new estimate, the system will ask you to select whether the provider/facility is within or outside your practice.

    - If the provider is within your practice, the Good Faith Estimate Tool will pull in information such as the provider's NPI, TIN, etc. Just type their name in the Provider/Facility Name box, and the system will provide a drop-down from which you can select.
    - If the provider is outside of your practice, the information will need to be manually entered.

You will enter the charges associated with each provider/facility associated with the patient's care. They will show as a summary, with a full breakdown of charges.
