

# Support Electronic Referral Loops by Receiving and Reconciling Health Information (HIE Option 1)

07/08/2024 7:58 pm EDT

You can enter the data generated from receiving and reconciling DrChrono to your Healthmonix MIPSpro account.

## Description

For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS-eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.

## Exclusion

Any MIPS-eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS-eligible clinician has never before encountered the patient fewer than 100 times during the performance period.

## Definitions

**Transition of Care** – The movement of a patient from one setting of care (hospital, ambulatory primary care practice, ambulatory, specialty care practice, long-term care, home health, rehabilitation facility) to another. At a minimum, this includes all transitions of care and referrals that are ordered by the MIPS-eligible clinician.

**Referral** – Cases where one provider refers a patient to another, but the referring provider maintains his or her care of the patient as well.

**Current problem lists** – At a minimum a list of current and active diagnoses.

**Active/current medication list** – A list of medications that a given patient is currently taking.

**Active/current medication allergy list** – A list of medications to which a given patient has known allergies.

**Allergy** – An exaggerated immune response or reaction to substances that are generally not harmful.

## Reporting Requirements

**Numerator** - The number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.

**Denominator** - Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS-eligible clinician has never

before encountered the patient.

The denominator is determined by the number of appointments that are designated as a **New Patient, Transition of Care or Referral** in the appointment window that have a Clinical Summary (CCDA XML) associated to the New Patient/Transition of Care/Referral Appointment.

**Schedule Appointment** ✕

Appointment | Billing | Eligibility | Vitals | Growthcharts | Flags | Log Comm. | Revisions | Custom Data | MU Helper

Type  Appointment  Video Visit  Walk-in  Transition of Care  Referral

OR

Appointment | Billing | Eligibility | Vitals | Growthcharts | Flags | Log Comm. | Revisions | Custom Data | MU Helper

Type  Appointment  Video Visit  Walk-in  Transition of Care  Referral

The numerator is the number of C-CDA files from the denominator that have been fully (the problems, allergies and medications) reconciled within the reporting period.

For more information on how to import and reconcile summaries view this article below:

You can enter your data into your Healthmonix MIPSpro account.

## Support Electronic Referral Loops by Receiving and Reconciling Health Information (PI\_HIE\_4)

**Complete:**

1.  This group receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period in 2023 MIPS.  
 None of the above

2. **Numerator:** Enter the number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.

**Denominator:** Enter the number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.
