Set Up ConnectEHR for FHIR

Last modified on 04/28/2025 3:42 pm EDT

To meet the Provide Patients Electronic Access to Their Health Information MIPS Promoting Interoperability measure, your practice must implement our ONC Cures Edition Fast Healthcare Interoperability Resources (FHIR) API. To get started, you must set up ConnectEHR for FHIR.

Configure FHIR APIs before starting your Promoting Interoperability reporting period to earn the maximum points toward the Provide Patients Electronic Access to Their Health Information measure.

Fill out the MIPS FHIR API Sign-Up Page completely. Not completing this entire process may impact your MIPS reporting.

You can use the ConnectEHR login credentials for third-party provider apps.

Set up ConnectEHR

Practice admin users can access API Management and set up users for ConnectEHR.

- 1. Select Account > API.
- 2. Select the ConnectEHR Setup for FHIR tab.

The Connect EHR Setup page opens.

3. Fill out the form and then select Connect.

Practice Group		
500588		
Practice Name		
Testside Primary Care		
Phone	Fax (Optional)	
555-555-1234		
Practice Email	Practice Email Domain	Status
100000000000000000000000000000000000000	me@mypractice.com's domain is mypractice	Not Connected

Activate users for ConnectEHR

It is currently not necessary for individual users to activate ConnectEHR; however, the connection must be established at the practice level.

- 1. Under **User Management**, search for the user.
- 2. Select Activate.
