

Prescribing Compound Medications (Mobile)

Last modified on 10/02/2024 4:46 pm EDT

The New Drug Database is Now Available in DrChrono!

In partnership with First Databank MedKnowledge (new drug database), DrChrono now supports the ability to electronically send compound medications that contain a controlled substance to print out for your patients or send electronically.

- Tap on the patient's name and select **Send eRx**.
- After the prescription entry screen loads, tap the plus () icon and select **Compound Medication**.

Note: All compound medication/s will need to be prescribed via the Compound (type) option.

- **When building a compound medication, the user will want to select the individual ingredients/medications first.** Each medication/ingredient will be a "Compound part". As compound parts are selected, the medication name will update to add the compound part.
- Tap the "+" button at the top right to add a Compound Part
- Tap the remove (-) icon to remove a Compound Part

Note:

- If the compound part is a controlled substance the system will indicate the level.
- If the compound medication/ingredient does not have any schedule II-V compound parts in it, the user will have to select the "There is no controlled substance within the compound prescription" checkbox in order to send the prescription.
- The user can then update the Medication name to match what should be sent to the pharmacy.
- Proceed with entering the appropriate information for the prescription (i.e. SIG, Dispense, Days Supply, Refills, Diagnosis Codes etc.)
 - The user can "Add to Favorites" to quickly prescribe the new compound medication in the future.

- Select Pharmacy
- Preview Prescription
- Send Prescription

For medications that include compound part(s) with a controlled substance

- An Authentication Required pop out window will appear to enter the required information.
- Sign & Send Prescription
- Once sent, the compound medication will appear in the drug name line on the prescription.

Re-sending Compound Prescriptions

Like non controlled and controlled medications, users can resend compound orders via...

- Tap patient name
- Medications
- Tap "Rx" icon for medication to prescribe
- Preview
- Send or press and hold Send for options to print prescription or fax to pharmacy

OR

- To print the prescription, tap the printer icon () and select the page size to print.

The newly generated medication order will appear in the Active Medication Orders list. The original compound medication order will then show in the Past Medication Orders list with a status of "inactive" and an "end date" of when it was resent.

Send a compound medication from favorites list

- Tap the patient name
- Send eRx
- Favorites
- Select Order from dropdown list
- Preview
- Send or press and hold Send for options to print prescription or fax to pharmacy

Send a compound medication from prescription drafts

A user has the option to save a compound medication prescription as a draft to send at a later time.

To send a compound medication from prescription drafts...

- Tap patient name
- Send eRx
- Drafts
- Choose prescription
- Preview
- Send or press and hold Send for options to print prescription or fax to pharmacy
