Release Notes for DrChrono Mobile Version 11.0.108

Updates

Clinical Notes

Summary	Description	Knowledge Base Article
iOS error log: Implement **Clinical Notes** error handling on iOS	To enhance the user experience and provide better support for **Clinical Notes** on the iOS platform, the following features have been implemented: • **More specific error messages:** Users can view detailed error messages when a switch/field fails to save successfully for easier troubleshooting and understanding of the issue. • **Copy diagnostics to the clipboard:** You can use a new button to copy diagnostic information related to the specific error to your clipboard. You can paste this information anywhere for further analysis or support purposes. • **Hyperlink for support ticket:** To streamline the support process, a direct hyperlink is available for you to file a support ticket for any issues encountered.	

First Databank (drug database)

Summary	Description	Knowledge Base Article

Summary	Description	Knowledge Base Article
Warning Shows for Medication or Supply Drug If It Is Unsearchable from FDB	When a medication is resent from the medication list using an outdated National Drug Code (NDC), the user is directed to the **Medication** tab on the send eRx screen. An alert notifies the user that the medication is obsolete. Alert indicators: • **Red warning:** The drug is not searchable • **Orange warning:** The drug name is converted based on NDC. Pharmacy user interface (UI)

Summary	Description	Knowledge Base Article
Add patient to preferred pharmacies from pharmacy search without setting it as a default pharmacy	The pharmacy is included in the preferred pharmacy field within the patient chart without being designated as the default pharmacy.	

Summary	Description	Knowledge Base Article
Improved UI to add pharmacy to favorite pharmacies and patient's preferred pharmacies	We made several enhancements to the UI to improve user experience. • Clear text when adding a patient's favorite pharmacy to ensure better visibility and understanding. • Color correction for patient default pharmacy selection buttons. Pharmacies appear in gray, and non-default ones in blue. • Added two new tabs, **Favorite Pharmacies** and **Patient Preferred Pharmacies**, for easier navigation and organization of pharmacy information. • Implemented a notification system to inform users when the previous default pharmacy has been removed upon selection of a new default pharmacy.	
Updated **Add to Preferred Pharmacies** notification	When you select **Add to Preferred Pharmacies**, the "Pharmacy added to patient defaults" notification appears instead of "Pharmacy added to patient's preferred pharmacy."	
Updated notification when deleting a favorite from the favorite pharmacy list	When you delete a favorite from the favorite pharmacy list, the "Pharmacy has been removed from preferred pharmacies" notification appears instead of "Pharmacy has been removed from favorite pharmacies."	

Appointment reunification

Summary	Description	Knowledge Base Article
Implement variable width for patient flag cells on iPad when the horizontal scrolling option is selected	An update has been made to enhance the variable width for patient flag cells on iPad when the horizontal scrolling option is selected.	

Summary	Description	Knowledge Base Article
Hide ICD-9 reference on the appointment screen on the iOS EHR	The ICD-9 billing type reference has been removed from the **Appointment Details** screen. Only ICD-10 codes now appear.	
Improve appointment list reselection logic	The system has been updated to retain the selected appointment and the scroll position on the **Appointment Details** screen.	

Other

Summary	Description	Knowledge Base Article
Add a **Support PIN** section to **Account Settings**	The new **Support PIN** feature has been introduced in **Account Settings**. This feature offers two options: **View Your PIN** and **Change PIN**.	
New login for SAML SSO users	You can log in via SAML single sign-on (SSO). SAML SSO simplifies your access process so you can use your existing credentials from your identity provider. This new login workflow is part of our ongoing commitment to security and usability.	SSO New Login Workflow

Resolutions

Appointment unification

Summary	Description
Appointment Details screen does not update when trying to refresh	We fixed an issue where the **Appointment Details** screen did not update when you refreshed the page. When changes are made to the appointment on another device, the appointment details page automatically refreshes to reflect the updates.
Vitals do not automatically update on the **Appointment Details** screen	We fixed an issue where vitals did not automatically update on the **Appointment Details** screen. After you save the changes, the vitals information updates.
Unable to change supervising provider on the **Appointment Details** screen	We fixed an issue where you could not change the supervising provider on the appointment details screen. The **Appointment Details** screen now updates to reflect changes made to the supervising provider for an appointment.
The EHR app unexpectedly crashes while switching offices/exam rooms	We fixed an issue where the EHR app crashed unexpectedly when switching between offices/exam rooms. The EHR app behaves as expected when switching between offices/exam rooms.

Summary	Description
The search bar does not show in the billing code search screen	We fixed an issue where the search bar did not show in the billing code search screen. The search bar now appears.
