

August 2024

09/09/2024 4:28 pm EDT

Missed our August Empower Session? Watch the recording to catch up. See below for the topics covered.

- **Immunization State Registries** - We have updated our vaccine inventory management screen and partnered with IronBridge so that medical practices can quickly add immunization records to a patient's file, record administered vaccines, and send them to their State Immunization Registry to meet state and federal reporting requirements.
 - **EPCS Compound Medications** - Our upgraded prescription module now enables the electronic transmission of prescriptions for compound medications containing controlled substances. This represents a significant advancement in our prescription capabilities, providing healthcare providers with a streamlined and efficient method for managing and transmitting complex prescriptions.
 - **Optimized and Customizable Clinical Chart** - This new feature will allow practices to customize both the patient header and patient chart within the web version of the application. This enhancement improves the user experience by allowing practices to prioritize and highlight the most relevant patient information based on role or specialty.
