

How to Connect Patient Dynamic FHIR API to OnPatient

Last modified on 09/18/2024 3:33 pm EDT

OnPatient is designed to make managing your healthcare easy and convenient, whether you need to schedule appointments, access clinical records, make payments, or securely communicate with your doctors.

DrChrono has enhanced OnPatient to enable you to connect seamlessly with third-party apps directly from your OnPatient portal account.

Steps to activate

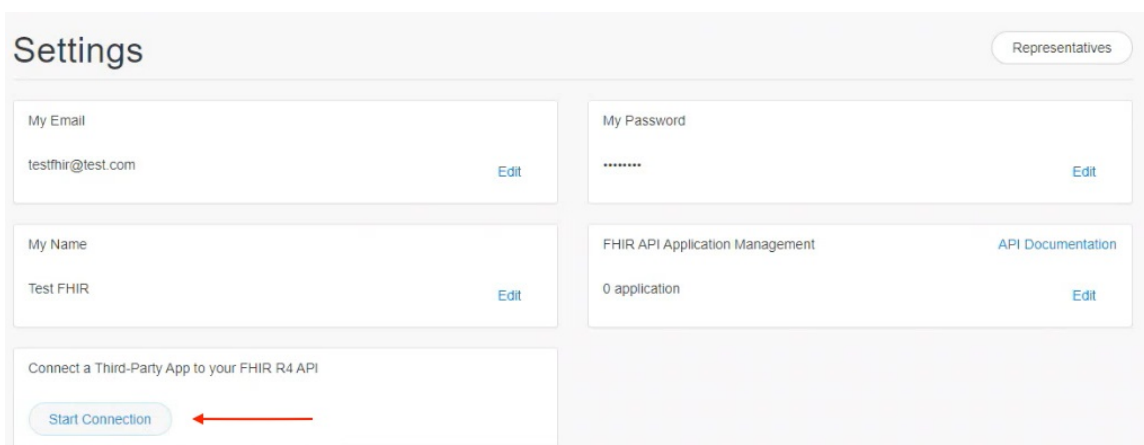

To connect to OnPatient, an existing active DHIT account is necessary.

1. Practice initiates an [onpatient invite](#) to the patient.

Patient steps...

2. Follow the invitation instructions to set up your [OnPatient](#) account.
3. On the signup screen, there will be a field for entering the Activation Code. You can find the activation code in the OnPatient invitation.
4. Once logged into the OnPatient account, click on your name (top right corner) to access the settings
5. Click start connection in the "connect a third-party app to your FHIR R4 API" box.

6. Click "activate your FHIR API" under the activation link.

Connect a Third-Party App to your FHIR R4 API

Practice Name
Apothecarion

API ID
101569

Activation Key
IRv5YeYAe/Yj73Ne

Activation Link
[Activate your FHIR API](#) ←

[Set Up Support: Setting up your FHIR API](#)

7. The link will take the patient to the DHIT landing page, where they can input their first and last name, date of birth, and activation key and submit. The activation key can be found in the settings of their OnPatient account under the "connect a third-party app to your FHIR R4 API" section.
8. The DHIT FHIR API account is now connected to the OnPatient account.

Patients can contact their Practice for any DHIT FHIR support issues.
