

# Best Practices for Building Custom Forms

Last modified on 01/28/2026 2:45 pm EST

Beginning **February 2 through February 24**, we will start retiring the legacy Form Builder as part of the transition to **Clinical Form Management**. For more details and answers to common questions, please refer to our [FAQ](#) article.

[Legacy Form Builder Sunset](#)

To help users maximize the utilization of the clinical notes feature, the following (4) best practices are recommended when creating a form.

## 1. Build Small Forms

The larger the form, the greater the risk of users encountering timeout issues when loading, saving changes, previewing, unlocking, or signing and locking their clinical notes. To minimize these risks, it's best to design forms according to the following guidelines:

- Use a maximum of 55 sub-fields per smart field
- Maintain an overall total of less than 200 fields per form

### Smart Fields

- When the smart field toggle is enabled for a field, it allows other fields to be designated as child fields of that parent field.
- To set a field to be a child field, you must select the name of the parent field in the parent field dropdown.
- If the parent field is enabled in the clinical note edit screen, the child fields will load into the clinical note edit screen.

The screenshot shows the drchrono Clinical Form Builder interface. At the top, there's a navigation bar with links for Schedule, Clinical, Patients, Reports, Billing, Account, Marketplace, Help, and a search bar. The main area is titled 'Progress Note' with a 'Changes saved' indicator. On the left, there are three toggle switches: 'Parent Switch' (OFF), 'Child Switch 1' (OFF), and 'Child Switch 2' (OFF). On the right, there's a sidebar titled 'Form Element' with a 'Clipboard' section containing various field types: 'C Switch' (selected), 'Fraction Field', 'Free Draw', 'Header', 'Multi Select', 'Yes / No', 'Reference', 'Text Field', 'Single Select', and 'Subheader'. The 'C Switch' option is highlighted with a blue border.

### Parent Field Settings

Edit Switch		
<input checked="" type="radio"/>	General	Customized Note      Billing Code Attachment
Question Text		
<div style="border: 1px solid #ccc; padding: 2px; width: 100%;">Parent Switch</div> <div style="text-align: right; font-size: 0.8em;">13 / 240</div>		
Default Value		
<input checked="" type="radio"/> Off <input type="radio"/> On		
Parent Field		
<div style="border: 1px solid #ccc; padding: 2px; width: 100%;">Select field</div>		
Spacing Within Note		
<input checked="" type="radio"/> None <input type="radio"/> New line <input type="radio"/> New paragraph		
Wide Field		
<input type="checkbox"/> OFF      Field will span the full row.		
Required		
<ul style="list-style-type: none"> <li>• Sets field as mandatory for providers and staff to preview the complete note</li> <li>• Sets field as mandatory for patients to continue to next part of check-in</li> </ul> <input checked="" type="checkbox"/> ON		
Smart Field		
<input checked="" type="checkbox"/> ON      Sets field as a parent field, controlling the visibility of all child fields.		

### Child Field Settings

Edit Switch

Spacing Within Note		
<input checked="" type="radio"/> None <input type="radio"/> New line <input type="radio"/> New paragraph		
Wide Field		
<input type="checkbox"/> OFF      Field will span the full row.		
Required		
<ul style="list-style-type: none"> <li>• Sets field as mandatory for providers and staff to preview the complete note</li> <li>• Sets field as mandatory for patients to continue to next part of check-in</li> </ul> <input type="checkbox"/> OFF		
Smart Field		
<input type="checkbox"/> OFF      Sets field as a parent field, controlling the visibility of all child fields.		

## 2. Set Forms to be Persistent for "Person" Level Data Only

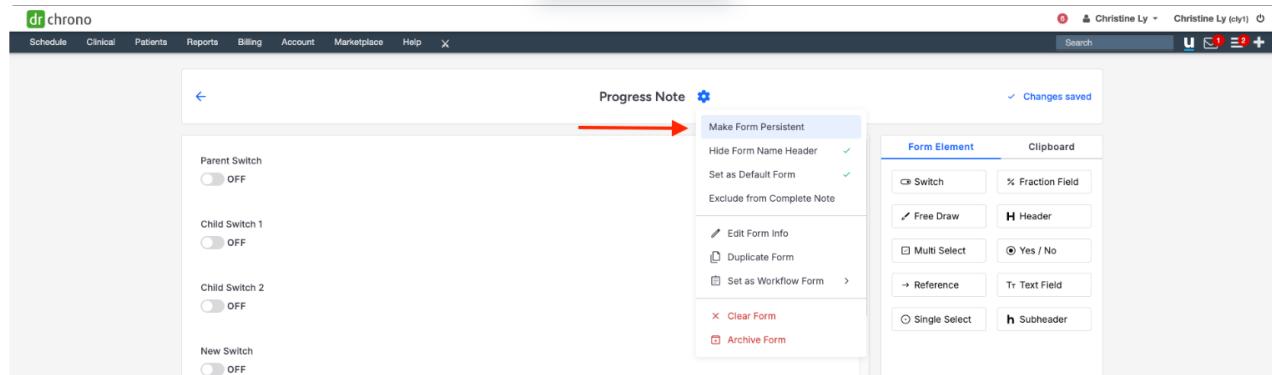

What is person-level data? An example of person-level data could include social or family history information, such as the patient's father being diagnosed with type 2 diabetes.

Forms for clinical notes should only be set to persistent if they are intended to document "person" level data. This type of data should be independent of specific encounters and should not require edits or changes after each appointment.

Persistent forms will copy forward the most recently locked clinical note data within a form field so that the next appointment will display the previously inputted information automatically.

If a user would like to copy forward non-person level data, it is recommended to use the "Copy Previous Note" button. This allows the user to manually select the desired forms and the appointment date of service.

What is an example of when to the "Copy Previous Note" functionality? If a user wants to copy previously entered values for the current appointment from an appointment that took place a year ago for the patient.

### 3. Allow the Save Process to Complete

Each time a clinical note form field is edited, a notification will appear indicating that an auto-save process has been initiated. Before navigating to another tab within the DrChrono platform or switching to a different tab/form in the clinical note, please wait for the auto-save notification to disappear. This indicates that the save process is complete.

The indicator is responsive and will update according to the status of the auto-save process:

Save in progress

Save completed successfully

Save failed to complete

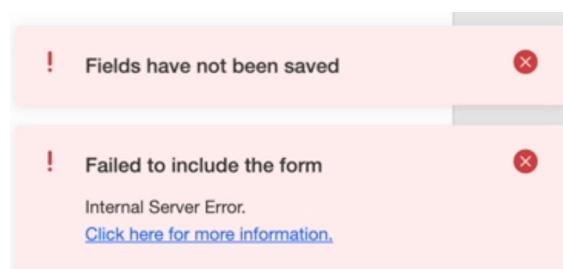

If the auto-save notification is still on the screen and you...

- navigate to another tab within the DrChrono platform (ex: Calendar, Form builder, etc), there will be data loss.
- toggle to another form within the same appointment, the data within this clinical note may potentially be out of sync.

For example: If a user enables a switch with billing codes linked and toggles to the billing section within the clinical note before the auto-save notification has disappeared. The linked billing codes may not appear in the billing section as expected until the save process has been completed fully.

If the save encounters an error, the user will see a notification in the bottom left corner of the screen, allowing them to copy diagnostics related to the issue.

If the user tries to move to another form before the auto-save process is completed, they will see the following pop-

up window:

 The "saving in progress" pop-up in the clinical notes is currently in beta testing, not all customers will see this enhancement immediately. An update will be provided once the feature becomes available to everyone.

 **Saving in progress**  
Including form in note...

Please wait for the save process to complete before navigating away from the page. If you leave this page, your latest updates may not be reflected correctly on the next page.

This prompt will close automatically once saving has completed.

[Dismiss](#) [Leave Page](#)

- **Dismiss:** Close the modal, and the user will remain on the current clinical notes form. The saving process will continue to run.
- **LeavePage:** Close the modal and the user will be redirected to the next form selected. The latest updates may not be reflected correctly on the next page.

#### 4. Do not Link Both Billing Profiles And Clinical Codes to Fields

When building forms, link either billing profiles or individual clinical codes to form fields, but not both. Linking billing profiles allows for modifiers to be added to the billing codes. In contrast, clinical codes added individually to a form field do not provide the option to include modifiers.
