

October 2024

Last modified on 10/30/2024 12:38 pm EDT

Missed our October Empower Session? Watch the recording to catch up. See below for the topic covered.

Join us as we introduce **RecordSync**, an innovative solution that streamlines your workflow and enhances your ability to provide comprehensive patient care through improved interoperability.

What is RecordSync?

RecordSync gives providers a comprehensive view of their patient's clinical history—where they've been seen, diagnoses, lab results, allergies, medications, immunizations, and other treatments. By querying trusted data sources across different healthcare systems, RecordSync pulls relevant patient records and care summaries directly into DrChrono, ensuring that you have all the insights you need to make care decisions with greater confidence.

Why RecordSync Matters

In today's fast-paced healthcare environment, having quick and seamless access to a patient's complete clinical history is essential. RecordSync addresses this need by:

- **Maximizing Efficiency:** Automating care location queries and document exchange, saving time and reducing manual effort.
 - **Improving Care Coordination:** Obtaining clinical records for your patient population, regardless of the EHR or care setting, ensuring continuity of care.
 - **Eliminating Information Gaps:** Providing access to nationwide data across networks for true interoperability, reducing fragmented care.
 - **Keeping It Simple:** Embedding clinical information directly into the EHR—no external portals required—allowing you to easily access critical patient data within your existing workflow.
-
