Enhancements

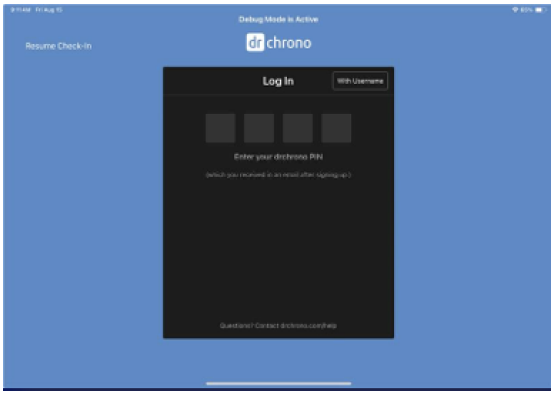
SSO Login Now Available on Resume Screen



What's New:
We've added **Single Sign-On (SSO)** support to the login and resume screens of the Check-In app.

Why It Matters:
Some practices using required SSO were unable to log in to the Check-In app. This update fixes that, bringing the Check-In app in line with the login experience of the EHR app.

What This Means for You:

- Users with SSO-only logins (no DrChrono password) can now sign in to the Check-In app.
- After the first SSO login, users can still unlock the app using Face ID, Touch ID, or a PIN.
- This update makes login more seamless and consistent across DrChrono's apps.
