

(ONC Update) Health Concern Assessment

Last modified on 02/03/2026 12:01 pm EST

The Health Concern feature allows clinicians to flag relevant concerns during structured data entry, ensuring interoperability via CCDAs using the correct LOINC code for Health Concerns (75310-3).

Supported Form Field Types

The following field types in the Form Builder support the ability to be marked as a Health Concern (**excluded:** Numeric fields, Headers, Subheaders, Freedraw (sketch fields)):

Field Type	Notes
Free Text	Custom note captured as-is
Yes/No (Switch)	Include Yes/No value in generated note
Single Select	Display selected value(s) in note
Multi-Select	Support multiple values and map to Health Concern
Checkboxes	Each selected option is considered a Health Concern entry

User Workflow in Clinical Form Management

Each supported field includes a "Mark as Health Concern" toggle in field configuration.

When toggled on:

- A Health Concern tag is associated with the field
- A customized text format is generated for the Clinical Note, based on:
 - Field label
 - Value(s) selected or entered
 - Date if applicable

Clinical Note Behavior

The output of Health Concern–flagged fields appears in the Clinical Note using standard formatting:

- Switches/Yes-No fields reflect the value (e.g., "Fall Risk: Yes")
- Free text values show full user-entered content
- Multi-select or checkbox values list all selected concerns inline

Customized Note Section

The Customized Note section:

- Is editable by the user
- Defaults to the requirements listed above in "Clinical Note Behavior"
- If the note is not edited, this default format is used in downstream outputs

CCDA Output

Fields marked as Health Concerns:

- Are included in the Health Concerns section of the CCDA PDF generator
- Map to LOINC code 75310-3
- Are displayed as structured entries with date (if captured)

Chart-Level Health Concern Designation

Problem List Integration: Clinicians can mark a Problem (active or resolved) as a Health Concern via an inline toggle or checkbox. This status is stored and rendered in both:

- CCDA Health Concerns section
- Patient Summary or Problems list (optional: badge or visual tag)

Allergies List Integration: Clinicians can mark an Allergy as a Health Concern using the same toggle behavior as above. Status reflects in CCDA and optionally in Allergy List UI.

Users can:

- Use the date picker field to document the date
 - Select status field with the following options:
 - Active
 - Completed
-
