Finalizing Documentation

1. Once you've reviewed and edited your note, click "Send to EHR"
2. You'll have the option to provide feedback on the overall accuracy of the note
3. The system will show a preview of how the note will appear in DrChrono

How Notes Appear in DrChrono

Scribe intelligently maps each section to the appropriate field in DrChrono:

- **Medications and Allergies** → Flows to the Medications and Allergies section
- **Plan** → Flows to the Plan section
- **Assessment** → Flows to the Assessment section
- **Complete note output** → Appears in the yellow notes section below existing DrChrono documentation

You can continue to use any form field elements you've been using in DrChrono. The Scribe output will exist in the yellow note section, preserving your existing workflow.

Printing Options

Scribe offers flexible printing options:

- **Print Whole Note:** Creates a complete document with all sections
- **Print by Section:** Allows you to print individual sections as needed

Post-Submission Editing

After sending your note to DrChrono, you can still make edits directly in the EHR if needed. All sections will be properly placed in their designated areas, maintaining the structure and organization of your documentation.
