

Inactive Billing Code Alerts

Last modified on 04/14/2026 4:51 pm EDT

The system will automatically flag any inactive ICD-10, CPT, or HCPCS codes at the appointment level as soon as they are applied—regardless of whether they come from templates, billing profiles, or a manual entry. This real-time alert gives staff immediate visibility into coding issues, allowing them to make corrections earlier in the workflow instead of discovering errors during claim submission.

Identifying outdated ICD-10, CPT, and/or HCPCS codes helps reduce claim rejections, minimize billing delays, and decrease time spent on rework. It also improves overall coding accuracy and streamlines collaboration between the front office and billing teams, leading to a more efficient and predictable revenue cycle.
