

Create Custom Roles

Last modified on 06/16/2026 6:17 pm EDT

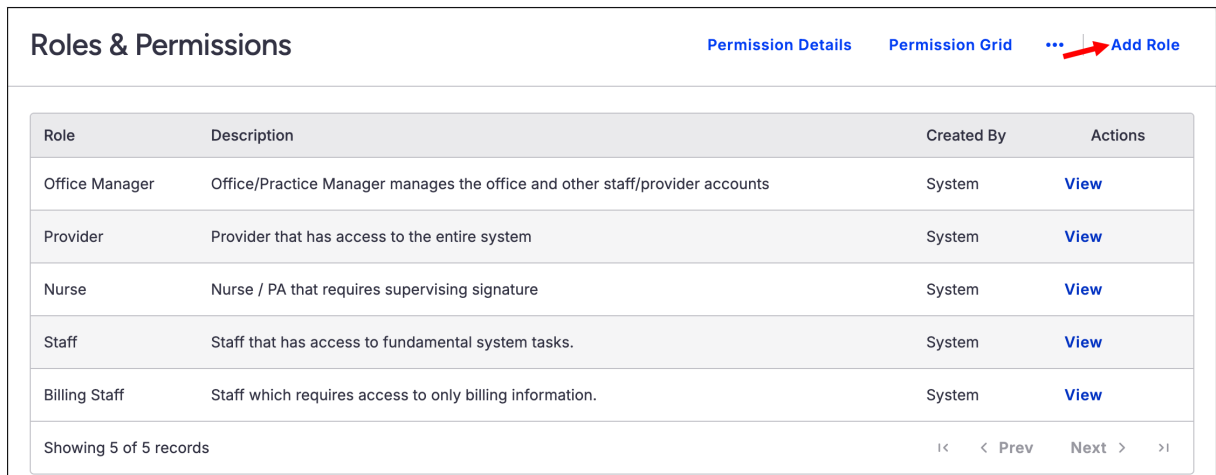

Your practice can have staff members with different permission levels. Use roles to customize which staff members have access to different permissions. You can create custom roles on the **Roles & Permissions** page.

When modifying permissions and settings, the system follows a hierarchical order.

- The system initially looks for any user-level settings to show
- If there's no user setting, the system looks for any role-level settings
- If there's no role-level setting, the system looks for any practice-level setting
- If there's no practice-level setting, the system shows the DrChrono default settings

Create a custom role

1. Select **Account > Practice Management > General Management > Roles & Permissions**.
2. Select **Add Role**.

The screenshot shows the 'Roles & Permissions' page. At the top right, there are three tabs: 'Permission Details', 'Permission Grid', and 'Add Role'. The 'Add Role' tab is highlighted with a red arrow. Below the tabs is a table with the following columns: Role, Description, Created By, and Actions. The table contains five rows of roles: Office Manager, Provider, Nurse, Staff, and Billing Staff. Each row has a 'View' link in the Actions column. At the bottom of the table, it says 'Showing 5 of 5 records' and has navigation arrows for 'Prev' and 'Next'.

Role	Description	Created By	Actions
Office Manager	Office/Practice Manager manages the office and other staff/provider accounts	System	View
Provider	Provider that has access to the entire system	System	View
Nurse	Nurse / PA that requires supervising signature	System	View
Staff	Staff that has access to fundamental system tasks.	System	View
Billing Staff	Staff which requires access to only billing information.	System	View

Showing 5 of 5 records

3. Enter the name and description of your new custom role.
4. Select the permissions and then select **Add Role**.

Permissions are organized by category, and you can enable or disable them individually or by group.

Add Role ✕

Role *

Description

Permission

All ▾

Appointment scheduling Enable All

Access Scheduling	Allow the user to view, add, and edit patient appointments and other scheduling features	✕
Appointment Provider Selection	Allow the user to schedule appointments for all providers in the practice group	✕

Patient Disable All
