

S710 Stripe Card Reader Overview

Last modified on 09/14/2026 12:07 pm EDT

The S710 card reader lets your practice accept in-person card payments—tap, chip, or swipe—directly through DrChrono Payments. When a patient pays via the device, the payment posts automatically to their account, so front desk staff doesn't have to key in card numbers by hand or post payments manually to DrChrono.

What the S710 does

- Accepts tap, chip, and swipe payments, so you don't have to key in card numbers manually.
- Connects over WiFi—no cables to the computer, tablet, or mobile device.
- Posts completed payments to the patient's account automatically.
- Supports multiple devices per practice, each connected to one or more DrChrono Payments (powered by Stripe) merchant accounts.

The S710 doesn't print paper receipts. Receipts are sent by email, text, or PDF, the same way as other DrChrono Payments receipts.

Where you can use it

You can collect a device payment from any of the following locations:

- Patient Demographics
- Patient Payments
- An appointment's billing details
- Payment Plans

On Mobile and Check-In app

- An appointment's billing details
