Open Beta Opportunities

Last modified on 11/10/2026 7:11 pm EST

Want to help shape DrChrono features before they're released? As a beta tester, you'll get early access and a direct line to the team building it. Open beta programs are listed below. If none are listed, check back because new ones come up regularly.

Feature	What You'll Get
After Visit Summary	Create personalized, easy-to-understand after-visit summaries using DrChrono's Form Builder to share important visit information with patients. Practices using EverHealth Scribe can also automatically generate summaries based on the clinical conversation. Summaries can be shared through OnPatient or printed for convenient patient access.
In-Chart Clinical Notes	Access relevant patient chart information directly within the **Clinical Notes** module while documenting a visit. This integrated experience reduces screen navigation, making it easier to review patient information and complete clinical documentation.
Message Center: Incoming & Outgoing Fax	Manage incoming and outgoing faxes through an enhanced **Message Center** experience, now with patient chart context available directly within fax conversations. Review relevant patient information without leaving the **Message Center**, streamlining communication and minimizing interruptions to your workflow.
OnPatient V2	Experience the next generation of DrChrono's patient portal, featuring an updated interface, improved navigation, and enhanced communication tools, including threaded patient messaging. OnPatient V2 makes it easier for patients to engage with their care and stay connected with your practice.
Patient Statement Automation (Phase 1)	Reduce manual billing work by automating patient statement generation and delivery. Customize statement schedules, balance thresholds, exclusions, and messaging while maintaining control over whether statements require staff approval or are sent automatically. Billing teams can easily review and manage statement batches, helping streamline patient collections.
Public Intake	Collect patient intake forms without requiring patients to create an OnPatient account. **Public Intake** gives practices a more flexible way to collect patient information and paperwork before a visit.
Telehealth-Only Office	Simplify online scheduling for practices offering virtual-only appointments. When an office is designated as telehealth-only, patients booking through DrChrono's online scheduling widget or OnPatient will automatically be scheduled for a telehealth visit, eliminating the need to manually select the telehealth option.
